

DISINFECTING PROCEDURES FOR HIGH TOUCH SURFACES

Wear Gloves when using any chemical or cleaning product.

Use a small amount of the disinfectant to dampen a rag. ***Do not soak the rag.***

Wipe the surface with the damp rag you want to disinfect.

Allow the surface to air dry.

Dispose of gloves and wash your hands.

If you were provided a white rag, the rag can be used multiple times before discarding.

If you have questions about the disinfectant or its use contact your EMS Supervisor or EMS at 54162 or 42803.

Thanks “Work Safe Be Safe”

Example of High Touch Surfaces: doorknobs, telephones, keyboards, chair arm, work surface, refrigerator/microwave door/controls and computer mouse.
